

Afterclass

An AI teacher that lives inside Google Classroom.

Your notes. Your pace. Your next breakthrough.

Agents, Everywhere • Global Hackathon
Singapore • 12 September 2026

Everything is in Classroom. Nothing is together.

Scattered across posts

Notes here, worksheet there, test date in the Stream.

No search inside files

Classroom cannot read a PDF.

No sense of what comes first

Behind? Nothing tells you where to start.

So students open a chat tab that has never seen their notes.

One topic. Four places. Five tabs.

Put the teacher where the work already is.

"Most agents still wait inside a separate chat window." — Agents, Everywhere challenge brief

A separate chat tab

- ✗ Never saw the post
- ✗ Answers from the internet
- ✗ Forgets your mistakes
- ✗ You hunt for the file

Afterclass, inside Classroom

- ✓ Reads the posts you tick
- ✓ Cites the teacher's passage
- ✓ Adapts to your answer
- ✓ Plans around your time

A Chrome extension. The real Classroom page. Nothing written back.

One overlay, on the same tab.

Study these together

PDFs open beside the lesson.

Click-to-open citations

Every explanation points to a passage.

Teaching that adapts

Wrong? Reteach. Right? Move on.

Catch Up in your time

15 minutes in. A cited plan out.

Sketch it. Ask about it.

The tutor marks your shapes.

Teach me at the whiteboard

The tutor draws the idea step by step.

The demo, in six moves.

01

Tick two electricity posts

Study these together.

02

Both PDFs open as tabs

The teacher's real files.

03

15 minutes. Build my plan.

Cited steps that fit.

04

Ask across both documents

Or sketch it. The tutor marks your drawing.

05

Answer wrong on purpose

The tutor reteaches. The plan reorders.

06

Teach it back. Close. Resume.

Same Classroom page underneath.

Same question. Two answers. Two enforced paths.

"In a series circuit with two lamps, is the current after the second lamp smaller than before the first?"

STUDENT ANSWERS WRONG

"Yes. The lamps use up the current."

Assessment	incorrect
Misconception	current is consumed
Required action	reteach, with a cited passage
Plan	this gap becomes step one

STUDENT ANSWERS RIGHT

"No. Current is the same at every point."

Assessment	correct
Misconception	none
Required action	practice
Next	predict two ammeter readings

Enforced on the server. Rewording the script does not pass.

How it works

OpenAI structured outputs · Realtime voice · read-only Google scopes · 82 service tests · 20 browser tests

Built to be trusted, not just believed.

Citations are checked

Exact quote, or rejected.

The lesson is a state machine

The server decides what is allowed.

Reviewer and tutor must agree

Disagree? The turn is dropped.

Plans fit the budget

Minutes never exceed your time.

Read-only

Nothing written back. No grades.

Documents are data

Notes cannot hijack the tutor.

Where this goes next

- Teacher-installed Classroom add-on
- More subjects. Maths and physics notes are ready.
- Evidence teachers can see, with consent
- A five-minute Catch Up on the bus

Not today: grading, turn-in, dashboards.

Afterclass

Your notes. Your pace. Your next breakthrough.

An AI teacher inside Google Classroom.
